

Antibacterial Screen

protecting ATM users

IN2GUARD

TOUCH SCREEN PROTECTOR

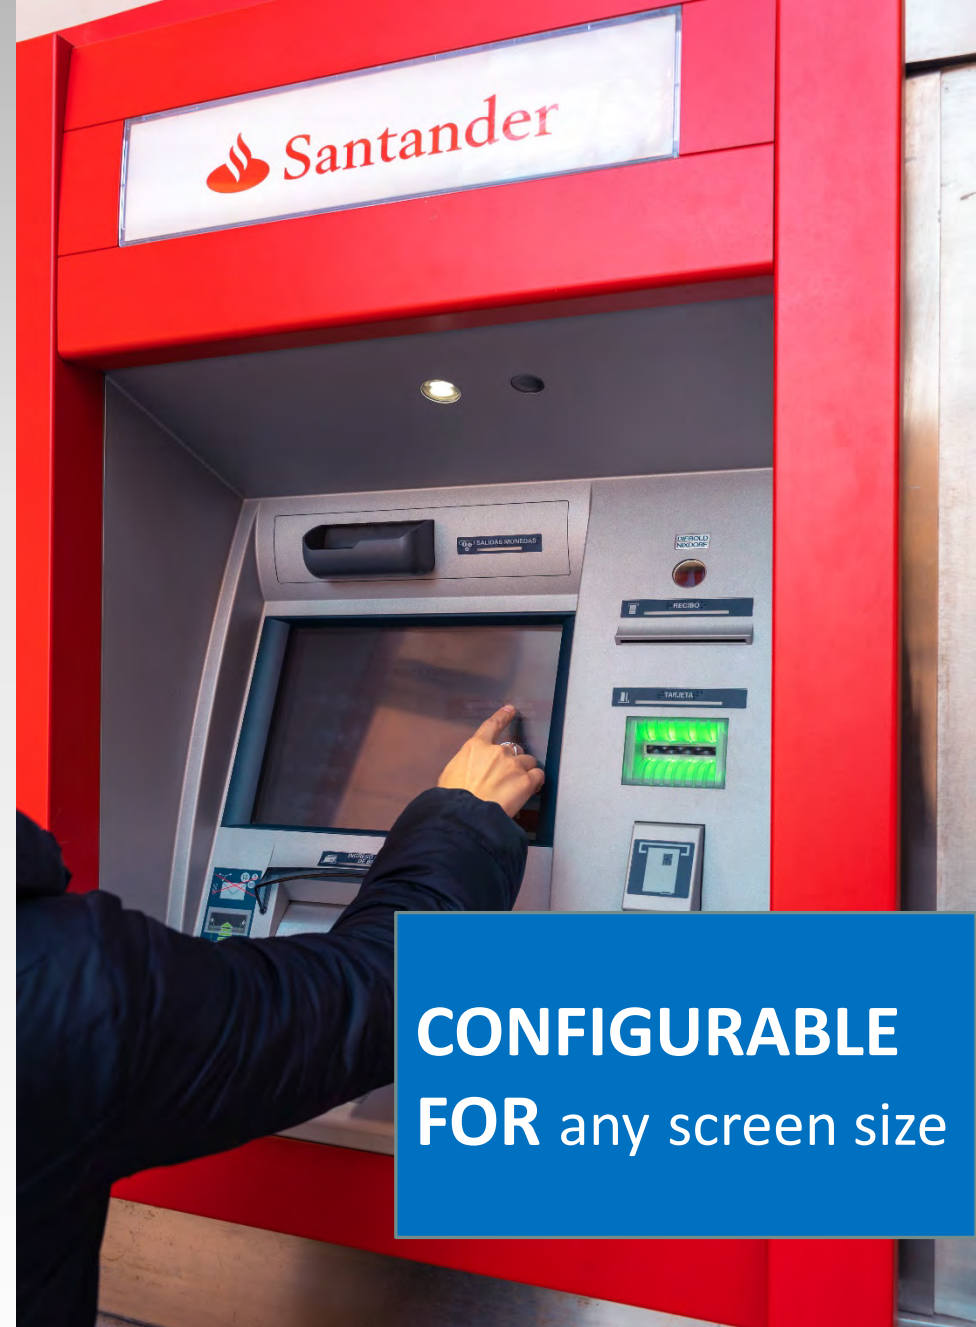

IMMEDIATE BENEFITS

The protector eliminates by 99,9% the bacteria on a screen.

Additional properties are:
high transparency, anti-fingerprint, multi-touch optimization, easy cleaning and removal without residue.

INNOVATIVE SAFEGUARD

ATMs are common in our daily life and using these should be convenient anytime. For public touch screen displays we recommend this innovative antibacterial shield. It helps to protect health of the user.

**CONFIGURABLE
FOR** any screen size

HOW IT WORKS

The technology embeds antibacterial agents on the screen protector's outer layer, killing the bacteria on your display. These active metal-oxide agents are harmless to the human body but deadly for the bacteria. This ensures that you are safe whenever using the device

CUSTOMIZE with your company's corporate design

This technology has been tested by Quality Labs BT GmbH in Nuremberg, under antimicrobial norm ISO 22196.

This antibacterial layer is also solvent resistant, allowing the antibacterial effect to remain in harsh environments.
